

TAYLOR IRAHAMBAYE

Full-Stack Software Engineer | SaaS Architect

Nairobi, Kenya | +254 720 660 141 | taylsele@gmail.com | github.com/irahambaye/taylor | linkedin.com/in/irahambaye-taylor

PROFESSIONAL SUMMARY

Full-Stack Engineer specialized in Python, Django, and multi-tenant SaaS architecture. Hands-on experience integrating live M-Pesa APIs (STK Push, C2B, B2C gateways) into production-ready platforms. Focused on automating manual financial operations, utility scaling, and configuring multi-tier database isolation layers.

TECHNICAL CORE COMPETENCIES

- **Backend & DB:** Python, Django, Django REST Framework, PostgreSQL, SQLite, Multi-Tenant Isolation
- **Fintech & APIs:** M-Pesa Daraja API, STK Push, C2B/B2C, Africa's Talking (SMS Gateway), n8n
- **Frontend & Cloud:** JavaScript, HTML5, CSS3, Bootstrap, Railway Deployment, Git Version Control

KEY TECHNICAL PROJECTS & SAAS SYSTEMS

RentShield SaaS — Creator & Lead Developer

Built a complete property management SaaS platform handling isolated data views for agencies, managers, and tenants.

- **Payment Flow:** Integrated M-Pesa STK Push and C2B payment links to let tenants pay rent directly from their dashboard and immediately download a generated PDF receipt.
- **Bulk Notifications:** Wrote custom workflows via Africa's Talking API that automatically calculates line-item balances (rent, water, electricity) and texts them directly to unpaid tenants.
- **Accounting Engine:** Coded the backend math that automatically sums up accumulated rents, utilities, and corporate KRA tax provisions to replace manual ledger tracking.
- **Access Control:** Set up role-based permissions ensuring caretakers see vacancies and manage tenants without having access to or touching the cash collection side.

KippaMart SaaS — Multi-Tenant E-Commerce Platform

Created an e-commerce platform focused on complete merchant data separation and automated payment splits.

- **Architecture:** Programmed database-level merchant isolation under a single unified code footprint.
- **Fintech Routing:** Configured M-Pesa checkout endpoints to handle live, automated real-time merchant commission distribution and split payments.
- **Reporting:** Used openpyxl to build automated data pipelines that dump live inventory metrics directly into structured Excel sheets for system admins.

PEFA Cathedral Portal — Full-Stack Developer

Built an operational church system to handle digital giving streams and administrative tracking dashboards.

- **Dashboards:** Created clean admin panels so non-technical staff can change homepage banner images and keep track of financial targets for community seed projects.
- **Giving Channels:** Deployed secure digital offering collection tools synced next to a responsive video streaming window.

EXPERIENTIAL PROFILE

Freelance Software Engineer & Solutions Architect | 2024 – Present

- Handle the full product lifecycle: from initial database schema layout to production cloud launch on Railway.
- Refactor slow, paper-based business bottlenecks into lightweight script automations for local fintech applications.

EDUCATION

- **Self-Directed Specialization & Practical Portfolio Implementation** (Software Engineering & Fintech Architecture)
